To update the Safire Smart 4E1 camera with Wifi and with P2P access, 2 processes must be carried out, as long as the camera has a version prior to the following one:

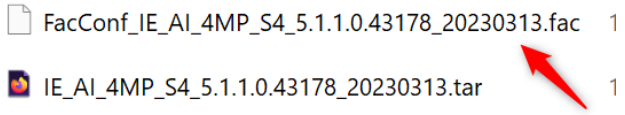

- First the firmware has to be loaded into the camera:

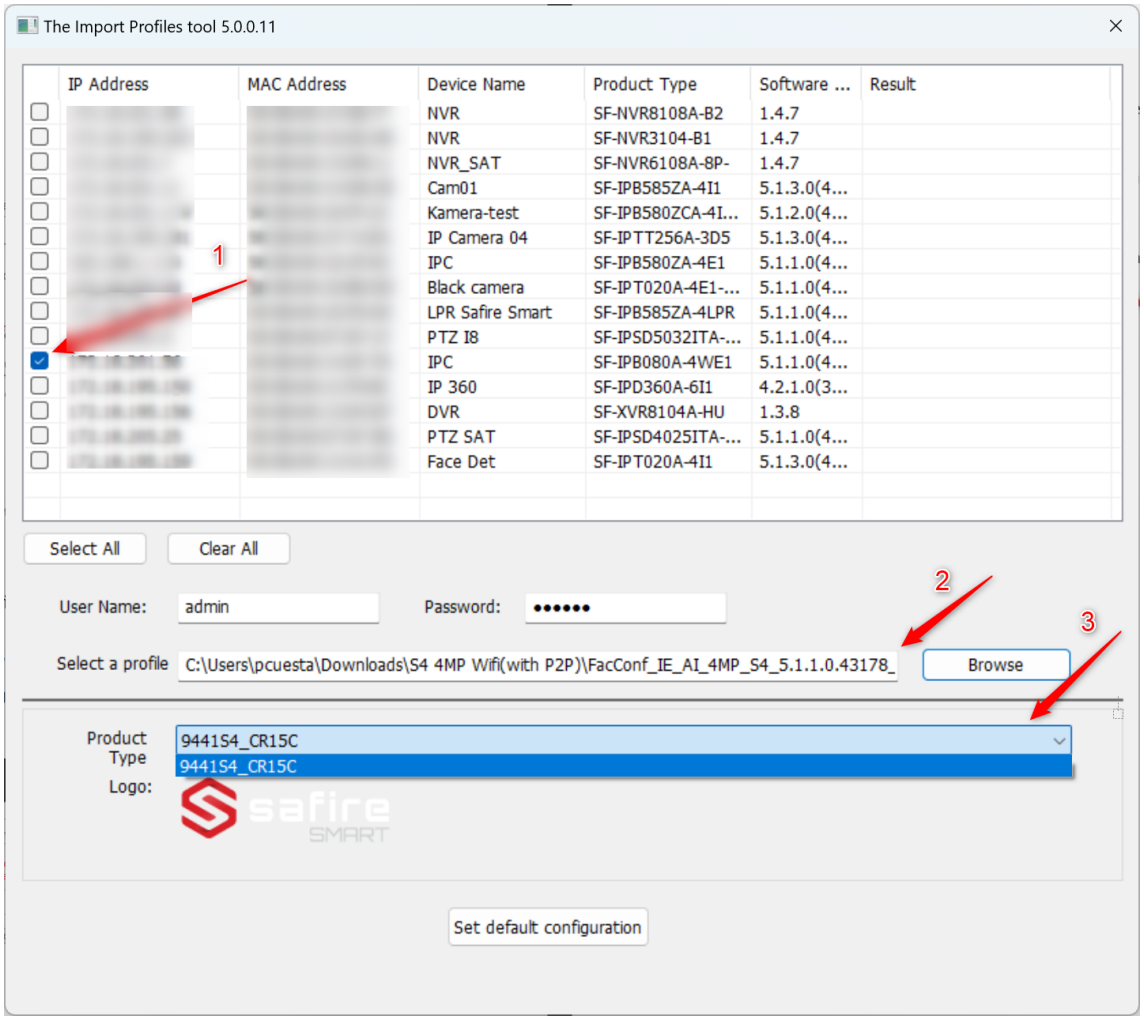

- Once the camera has been updated, the following software must be downloaded:
    - Factory Tool Decrypt

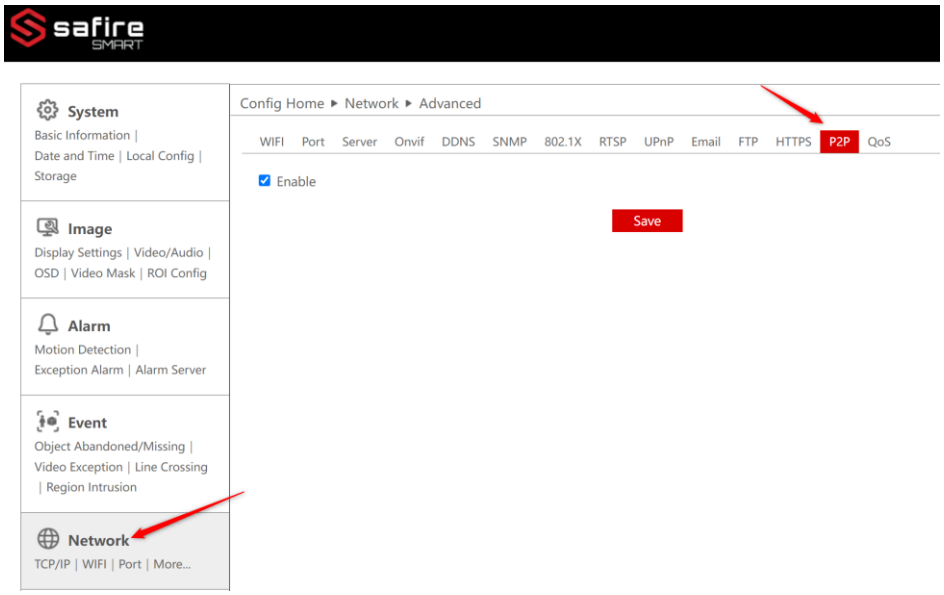

This software has to be run, select the camera and choose the .fac file and the appropriate model from the options that appear:

This process will load all the updated parameters to the camera and return it to factory settings.

Once these processes have been carried out, the camera will have the P2P section.

The QR code or the ID for the APP can be found in the information section:
